- Environment Standardization: Use a controlled environment to minimize variability (e.g., same hardware, network conditions).
- Baseline Establishment: Record initial performance metrics to compare against post-optimization results.
- Data Consistency: Ensure input data, workload profiles, and test parameters are consistent across runs.

Tools and Resources

Depending on the domain, different tools can be employed:

- Performance Testing Software: JMeter, LoadRunner, or Gatling for web applications.
- Hardware Benchmarking Tools: SPEC benchmarks, PassMark, or Cinebench.
- Custom Scripts: For specialized components or internal modules.
